Configure Scaling Activity Notification

You can manually execute a simple scaling rule to start a scaling activity. After the scaling rule is executed, you can go to Scaling Activities to view the scaling result. Each scaling group can have a maximum of 50 scaling rules.

Create Scaling Rule | Rule ID ⌄ | Enter scaling rule IDs. Separate multiple I... | Search |

Scaling Rule ID/Name	Rule Type	Start Time	Operation	Actions
asr–l4v7eskf70iunv9sgdhk Rule2	Simple Scaling Rule	Triggered by an associated event–triggered task: Rule2–2 Before the scaling rule is executed again, it must wait for the scaling activity to complete and the cooldown period to expire.	In the scaling group, InstancesRemove 1 Instances	Execute | Edit | Delete
asr–l4vbbk9aaah4uuvsm9c4 Rule1	Simple Scaling Rule	Triggered by an associated event–triggered task: Rule1–1 Before the scaling rule is executed again, it must wait for the scaling activity to complete and the cooldown period to expire.	In the scaling group, InstancesAdd 1 Instances	Execute | Edit | Delete

Each time a scaling rule is executed, or you manually add instances to or remove instances from the scaling group, a scaling activity is triggered. You can create notification rules to enable Auto Scaling to notify you of any changes in the scaling group. This way, you can obtain dynamic information about the scaling group and manage the group at the earliest opportunity.

Search by scaling activity ID. Separate multiple IDs with commas (,).   [Search]
